

HD50 system

HEAVY DUTY FLUSH SURFACE EXPANSION JOINT

Radflex HD50 System

This heavy duty mechanical expansion joint has been added to our range of joints to facilitate the need for greater vehicular loading and increased durability where heavy truck use or turning restrictions dictate.

Typical areas of use are multi-storey car parks, service decks, loading bays and bridges, where this system is equally applicable to new and refurbishment contracts, it's versatility being able to accommodate existing finishes.

The HD50 system features the double laminated Radflex 125 waterproof membrane bonded to the substrate, which links the waterproofing on each side of the joint gap. The membrane is then protected by a metal reinforced rubber nosing which is anchored through the Radflex 125 into the concrete deck with A4 grade stainless steel chemical anchors.

The butyl rubber compound formulation of Radflex 125 is tough, weatherproof and flexible, with proven performance worldwide. It is used in conjunction with Radflex epoxy adhesives designed for long-lasting bonding between the rubber and the substrate. The result is a continuous watertight finish throughout the structure.

Steel and aluminium reinforced EPDM nosings are utilised to protect not only the membrane but also the edges of surrounding finishes from constant vehicular loads.

The inherently flexible HD50 system is suitable for gaps of up to 50mm at mid temperature. It can accommodate rotational and vertical movement criteria of 6mm with lateral flexibility up to 50mm in a completely watertight joint.

Configuration

- Closed cell foam
- Polymer modified mortar haunches
- Radflex epoxy adhesive
- Radflex 125 membrane
- A4 grade stainless steel chemical anchors
- HD50 EPDM nosings (1.83 m lengths)
- Sealants

Materials Performance

The component parts of the system are non-degradable, unaffected by UV light or ozone and completely impervious to water or water vapour. Once installed, the waterproof membrane is completely protected by the HD50 nosing, ensuring a long-lasting, effective flush surface expansion joint. Robust materials, straightforward installation and proven high performance together meet the exacting standards of the modern construction industry.

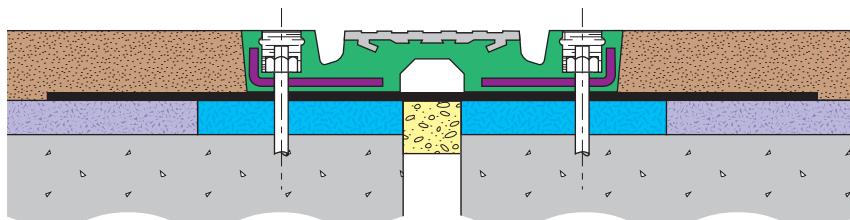

Health and Safety

Installation and use causes no 'health and safety at work' hazards, provided that manufacturers' instructions are followed regarding adhesives, sealants and chemical fixings.

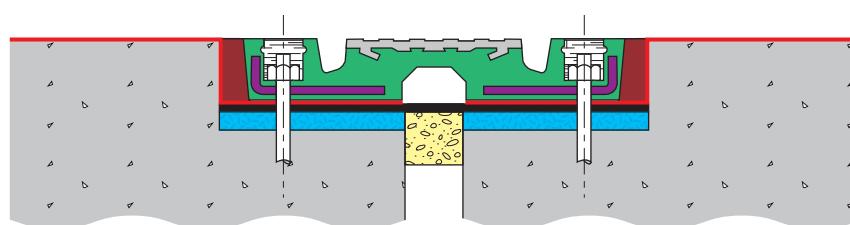

HD50 system

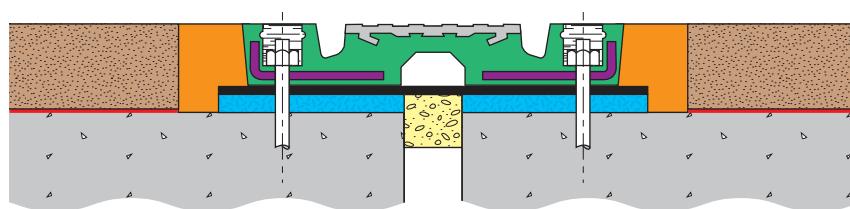

HEAVY DUTY FLUSH SURFACE EXPANSION JOINT

HD50 in asphalt

HD50 rebated in concrete

HD50 with resin transition strips

Paving Grade Asphalt	Concrete	Galvanised Steel Angle
Roofing Grade Asphalt	Radflex	Sealant
Polyurethane Resin Mortar	Closed Cell Foam	Nosing
Polyurethane Sealant	Waterproof Membrane	Polymer Modified Mortar

Technical Specification

Radflex HD50 movement joint including Radflex 125 DLM x ____ mm wide, nosings, polymer modified mortar haunches ____ mm x ____ mm deep, adhesives, fixings and sealants. Supplied and installed by Radflex Contract Services Ltd. (Tel: 01322 276363 / 0191 417 6677).

Notes:

Radflex is a registered trade mark. The Radflex 125 system is the subject of UK Patent 1288314. All reasonable care has been exercised in preparing this data sheet, which to the best of our knowledge is true and accurate. Due to our programme of continuous improvement, the specification may be subject to updating.

Preparation

Concrete surfaces must be float finished, abraded to remove laitance and provide good bonding substrate. If the concrete surface is unsound, it should be made good with polymer modified mortar, in accordance with manufacturers' instructions. The concrete shoulders must be smooth and level across the expansion gap. We do not recommend application to lightweight or sand and cement screed.

Mastic asphalt surfaces to which the Radflex membrane is to be bonded must be well sand-rubbed to remove nibs and excess bitumen fat to give a clean, flat surface free from surplus sand.

Reference Installations

Radflex systems are installed in many different traffic conditions in a variety of climates. We are pleased to refer enquirers to relevant applications to confirm satisfaction with the installation and system performance.

Radflex Design Services

Technical advice and design services are available from our Technical Department, including reviewing requirements of particular applications, ensuring installation of the most appropriate Radflex system to suit specific sites and applications. Radflex HD50 can be adapted to most types of construction.

Columns, Walls, Kerbs and Corners

Continuity of the waterproof seal is ensured by bonding the Radflex membrane to the surface of the horizontal asphalt/concrete and to the face of skirting asphalt/concrete. The HD50 module is finished flush against the vertical detailing. Internal and external corners can be easily accommodated with the Radflex 125 membrane.
